

Here's how to apply your stickers

Please ensure your hands are clean, and that the surface to be stuck to, is clean and grease free. You can use water or a Window Cleaning product for this i.e. Mr Muscle Window Cleaner.

Do not apply stickers in direct sunlight, or to a hot surface

1. Remove around 1/4 of the sticker from the 'carrier sheet'

If the sticker is difficult to peel away, then bend a corner slightly towards you and then away from you. This should release enough for you to peel back

2. Apply to the prepared area slowly and evenly, pulling the 'carrier sheet' away slowly.

3. Use clean hands to smooth the sticker to the surface

4. Applying your sticker slowly reduces the amount of bubbles appearing

If you find bubbles appearing, you can pull the sticker back to where the bubble starts and smooth again.
