

# Here's how to apply your vinyl cut stickers

Please ensure your hands are clean, and that the surface to be stuck to, is clean and grease free. You can use water or a Window Cleaning product for this i.e. Mr Muscle Window Cleaner.

Do not apply stickers in direct sunlight, or to a hot / cold surface

Your sticker is supplied on a backing sheet, with 'Application Tape' already attached for you. We have already used a squeegee to lay the tape, but it is recommended that you squeegee the Application tape, so that all the sticker comes away with the tape.

1. Lay the sticker on a hard flat surface, with the Application Tape facing towards you. Using a squeegee (or you can use a Credit Card as a squeegee, but avoid scratching through the tape), motion the squeegee from the inside moving outwards.
2. Once you are happy that the Application Tape is secure, peel away the tape, to reveal the vinyl design being taken from the backing sheet. Please do this very slowly, so the design comes away in one piece on the tape. If any of the design is being left behind, then relay the tape and squeegee once more.
3. Now you have the design on the Application Tape. Apply the tape to the previously cleaned surface, making sure it is straight, and where you need it to be (using a tape measure if you need to).
4. Now the sticker is attached to the correct area, use the squeegee, motioning the squeegee from the inside moving outwards from the design, to help the sticker adhere to the surface.
5. Now you are ready to reveal your design. Peel the Application Tape away from the design, and surface, at a 45 degree angle, ensuring none of the design comes away with the tape. Peel very slowly, to get the perfect result. If any of the design is being left behind, then relay the tape and squeegee once more.

You are now presented with your great new vinyl sticker design
